

We Claim:

1. A specialized lighting fixture of the type comprising a lamp housing enclosing a source of illumination and a plurality of framing shutters for shaping and confining a light beam emitted by said fixture, wherein

5 (a) said framing shutters are mounted in said housing for radial and/or tilting adjustment with respect to said housing and have portions extending outward from said housing,

(b) said housing includes means for frictionally engaging said framing shutters whereby said shutters tend to remain in adjusted positions in which they are set
10 by an operator, and which further includes

(c) first and second locking plates generally surrounding said housing and positioned respectively on opposite sides of the outwardly extending portions of said framing shutters and arranged to bear against said outwardly extending portions, and

15 (d) releasable locking elements engaging said locking plates for causing said locking plates to apply clamping pressure to said outwardly extending portions and thereby locking said framing shutters in their adjusted positions with respect to said housing.

20 2. A specialized lighting fixture according to claim 1, wherein

(a) said releasable locking elements comprise at least one locking element engaging said locking plates in a region between each adjacent pair of framing

shutters.

3. A specialized lighting fixture according to claim 2, wherein

(a) said locking elements comprising locking screws engaging said locking
5 plates.

4. A specialized lighting fixture according to claim 1, wherein

(a) said locking plates comprise elements of closed configuration having at
least portions thereof in close contact with said housing to position said plates with
10 respect to said housing.

5. A specialized lighting fixture according to claim 4, wherein

(a) said housing is of generally circular cross sectional configuration, and
(b) said locking plates comprise generally circular, ring-like members having a
15 close fitting relationship with said housing.

6. A specialized lighting fixture according to claim 1, wherein

(a) said framing shutters comprise thin sheet-like elements including integral
portions thereof projecting generally radially from said housing and forming said
20 outwardly extending portions.
